

ICA-67 MADE EASY

What is ICA-67?

Interstate Certification Assurance (ICA) Scheme – ICA-67 *Inspection of Bananas for Freedom from of Soil and Plant Material*

ICA-67 is part of a national program that helps you move your bananas to other states without needing an inspector on-site each time. It's all about making sure your bananas are free from soil and plant material – which helps protect your farm, and the entire Australian banana industry, from pests and diseases. Being part of ICA-67 means smoother operations, better access to markets, and confidence that your fruit meets high-quality standards.

What's involved?

Getting started with ICA-67 is simpler than you might think. It's just a matter of putting a few systems in place and keeping track of what you're already doing well.

Your paperwork and records

Make sure you've got the right documents on hand:

- The current ICA-67 Operational Procedure
- The Certificate Completion Guidelines (WI-02)
- A copy of your Application for Accreditation (CAF-47)

You'll also need to keep these records:

- Pre-wash Bunch Inspection Records (CAF-139)
- Wash Water Monitoring Records (CAF-140)
- Packed Product Inspection Records (CAF-141)
- Staff Training Register (CAF-142)

Keep all records for at least 12 months or until your next audit – whichever comes later.

ICA-67 CHEAT SHEET

Your friendly guide to what's what and where to find it!

Core documents

The must haves

These are the key documents you'll need to get started with ICA-67:

Code	What it's called	What it's for
ICA-67	Operational Procedure	Your main how-to guide for keeping bananas clean and compliant.
CAF-47	Application for Accreditation	This is your form to apply and join the ICA-67 program.
CAF-49	Applicant Checklist	A helpful list to make sure you've got everything sorted before applying.
WI-02	Work Instruction for Certificates	Step-by-step instructions for filling out Assurance Certificates properly.

Records to keep

What you'll be tracking

These forms help you stay organised and compliant along the way:

Code	What it tracks	Why it matters
CAF-139	Pre-Wash Bunch Inspection	Records showing fruit was clean before it was washed.
CAF-140	Wash Water Monitoring	Shows your water is clean and regularly checked or changed.
CAF-141	Packed Product Inspection	Keeps track of final checks before your bananas head out the door.
CAF-142	Staff Training Register	Helps you keep track of who's trained and ready to go!

Hold onto these records for at least 12 months or until your next audit – whichever comes later.

Where to find these forms

You can download all the forms via www.interstatequarantine.org.au/ica-results and locate 'QLD ICA 67 - Inspection of bananas for freedom of soil and plant material'

ICA-67 CHEAT SHEET

Supporting your team

ICA-67 works best when everyone's clear on their role and trained with confidence. Here's who should know what:

- **Certification Controller** – understands the full process and has trained the team
- **Shed Manager & Fruit Receival Officer** – understand their day-to-day responsibilities
- **Packed Product Controller** – knows how to check fruit and fill in inspection records
- **Authorised Dispatcher & Signatories** – know how to correctly label packages and issue Assurance Certificates

We're here to support training and walk-throughs if needed.

Keeping it clean: your control systems

You'll want to have simple systems in place to:

- Spot fruit or wash water that doesn't meet cleanliness requirements
- Keep clean and unclean fruit separate during grading and packing
- Make sure only authorised, trained people sign and issue Assurance Certificates

These steps help keep your operations smooth.

Why join ICA-67?

By setting up ICA-67 on your farm, you'll:

- Avoid needing a government inspector for every shipment
- Maintain quality control right in your shed
- Access more interstate markets
- Support biosecurity for all banana growers
